Ohno, M., Sakai, K., Sakazume, N., Sagaki, D., Sato, K., Shibata, K., Shiraki, T., Tagami, M., Waki, K., Watahiki, A., Muramatsu, M. and Hayashizaki, Y. Direct Submission Computational Analysis of Shull-Length Mouse CDNAs Compared with Human Genome Sequences Mamm. Genome. 12, 673-677 (2001)

Normalization and subtraction of cap-trapper seelected CDNAs to prepare full-length CDNA libraries for rapid discovery of new genes. Genome Res. 10 (10), 1617-1630 (2000)

NIKEN integrated sequence analysis (RISA) system--384-format sequencing pipeline with 384 multicapillary sequencer. Genome Res. 10 (11), 1757-1771 (2000)

Computer-based methods for the mouse full-length CDNA encyclopedia: real-time sequence Clustering for construction of a norredundant cDNA library was prepared and sequenced in Mouse Genome CDNA library was prepared and sequenced in Mouse Genome Encyclopedia Project of Genome Exploration Research Group in Riken Genome CStences Center and Genome Science Laboratory in RIKEN. Division of Experimental Animal Research in Riken contributed to prepare mouse tissues.

/note="Organ: kidney; Vector: pBS-CMV; Site_1: Xho!;
Site_2: ECORI; Total RNA was extracted from the kidney
tissues of mature zebrafish. The poly (A)+ RNA fraction
was separated from total RNA by oligo (dT) callulose
chromatography. Library was initially constructed in the
lambdaZAP Express vector (Stratagene) and in vivo excised
into pBS-CMV vector."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Actinopterygii; Neopterygii; Teleostei; Ostariophysi; Cypriniformes; Cyprinidae; Danio.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           TITLE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             /clone lib="NCI CGAP GC6"
/note="Vector: pT7T3D-Pac (Pharmacia) with a modified
polylinker; Site 1: Not 1; Site 2: Eco RI; Plasmid DNA
from the normalized library NCI_CGAP GC4 was prepared, and
se circles were made in vitro. Following HAP purification,
this DNA was used as tracer in a subtractive hybridization
reaction. The driver was PCR-amplified CDNAs from a pool
of 5,000 clones made from the same library (cloneIDs
1257096-1228631, 1469064-1470983, and 1475592-1476743).
Subtraction by Bento Soares and M. Fatima Bonaldo. "

Not1; Site_2: Xho1; cDNA made by oligo-dT priming.

Size-selected on agazose gel. Average insert size -1kb. 5'

Xho1 site was destroyed after directional cloning.

Amplified once. Contact information: Hiroshi Inoue, MD, Mctabolism Div. (Alan Permutt Lab), Washington University School of Medicine, Box 8127, 660 South Euclid Ave., St. Louis, Mn 63110, E-mail: hinoue@imgate.wustl.edu, Tel: 314-362-1916, Fax: 314-747-2692."

CDNA Library Preparation: M.B. Soares Lab Clone distribution:
Researchers may obtain BWAP CDNA clones from RESEARCH GENETICS. It
should be noted that Bento Soares is generating a small number of additional specialized non-redundant arrays of BMAP CDNAs whose availability will be considered under appropriate and limited collaborative arrangements
Seq primer: M13 Reverse.

The sequence contained an oligo-dT track that was present in the oligonucleoride that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A tail. The sequence tag present in the cDNA between the Notl site and the oligo-dT track served to identify it as a clone from the normalized corpus striatum library CDNA Library Preparation: M.B. Soares Lab Clone distribution: NIH BMAP CDNA clones will be made available by the means that is soon to be determined. When NIH determines the means for distribution of the BMAP cDNA clones, this record will be updated accordingly when that means is determined. POLYA=Yes.

Concessive 1: Sall; Site 2: Bamil; cDNA library was prepared and sequenced in Mouse Genome Encyclopedia project of Genome Exploration Research Group in Riken Genomic Sciences Center and Genomic Science Laboratory in RIKEN. Division of Experimental Animal Research in Riken contributed to prepare mouse tissues. 1st strand cDNA was primed with a primer [5' GAGAGAGAGAAGAACCATCTTTTTTTTTTTTTTTTTT S), cDNA was prepared by using trebalose thermo-activated reverse transcriptase and subsequently enriched for full-length by cap-trapper. CDNA went through one round of normalization to Rot = 20.0 and subtraction to Rot = 479.0. Second strand cDNA was prepared with the primer adapter of strand cDNA was prepared with the primer adapter of strand cDNA was cleaved with XNOI and Bamil. Vector: a modified pBluescript KS(+) after bulk excision from Lambda FLC I."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CD598528

Oncorhynchus mykiss (rainbow trout)

Oncorhynchus mykiss

Bukaryota; Metazoa; Chordata; Craniata; Vertebrata; Buteleostomi;

Actinopteryota; Meopterydi; Teleostei; Buteleostei;

Actinopterygi; Salmoniformes; Salmonidae; Oncorhynchus.

E (bases it of 726)

G Govoroun,M., Guiguen,Y. and Le Gac,F.
Construction and primary characterization of normalized cDNA

Ilbraries in rainbow trout, Oncorhynchus mykiss

U Mpublished (2003)

/note="vyctor: pBlueScript II SK(+) XR; Site_1: EcoRI;
Site_2: XhoI; anamorph: Fusarium verticillioIdes. Library
FVN was obtained from RNA derived from a corn meal medium
culture of strain M.3125. These cultures were prepared by
inoculating an autoclaved mixture of 25 g corn meal and 5
ml distilled water with 5 ml of water containing 5 x 10e7
condia. The inoculated medium was mixed thoroughly,
distributed equally into two 100-mm plastic petri dashes,
and incubated at room temperature for four or six days."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Bukaryota, Fungi, Asconycota, Pezizomycotina; Sordariomycetes, Hypocreomycetidae: Hypocreales; Nectriaceae; Gibberella.

RNA prepared and library constructed by W. Walter Lorenz, School of

Forestry, University of Georgia; plant material prepared at the

Forestry of Florida; sequencing done in the Laboratory for

Genomics and Bioinformatics, University of Georgia. Sequence ends

have been trimmed to exclude vector and regions below Phred quality

16. Three-prime sequences are presented as their reverse complement

and have been trimmed to exclude polyA.

Seq primer: JENNEY (CAGGAAACAGCTATGACC).

FvN was obtained from RNA derived from a corn meal medium
culture of strain M-3125. These cultures were prepared by
inoculating an autoclaved mixture of 25 g corn meal and 5
ml distilled water with 5 ml of water containing 5 x 10e7
condia. The inoculated medium was mixed thoroughly,
distributed equally into two 100-mm plastic petri dishes,
and incubated at room temperature for four or six days."

Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT73-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library is GAAAGGCTAGT. Tissue was obtained from the provasoli-Guillard National Center for Culture of Marine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               DR646867 760 bp mRNA linear EST 12-JUL-2005 EST1036984 FvN Gibberella moniliformis cDNA clone FvNA630, mRNA sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     /notes __vector: pBlueScript II SK(+) XR; Site 1: EcoRI; Site 2: XhoI; anamorph: Fusarium verticillioides. Library FVN was obtained from RNA derived from a corn meal medium culture of strain M.3125. These cultures were prepared by inoculating an autoclaved mixture of 25 g corn meal and 5 ml distilled water with 5 ml of water containing 5 x 10e7
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Bukaryota; Fungi; Ascomycota; Pezizomycotina; Sordariomycetes; Hypocreomycetidae; Hypocreales; Nectriaceae; Gibberella.

/clone=lb="minie Wetcor: pYX- Asc; Site_l: EcoR I; Site_2: Not I; The library was constructed according Bonaldo, Lennon and Soares, Genome Research, 6:791-806,
1996. Denatured RNA was size fractionated on a 1% agarcs gel:First strand cDNA synthesis was primed with oligo-dr primer containing a Not I site. Double strand cDNA was size selected according to mRNA size fraction, ligated with EcoR I adaptor, digested with NotI and then cloned directionally into pYX-Asc vector. The library tag sequence located between the Not I site and the polyA tail is CAGCCACAC. This library was created for the University lows Brain Anatomy Project (BMAP): "Gene Discovery in the Developing Mouse Nervous System", supported by National Institute of Mental Health (NIMH), Hemin Chin, Ph.D.,

    No. is the number of results predicted by chance to have a
re greater than or equal to the score of the result being printed,
is derived by analysis of the total score distribution.

                                                                                                                                                                            212
